Our Strengths: What We Do

- **Package Insert (PI), Instruction for Use (IFU), Directions for Use (DFU)** Pharmaceutical and Medical manufacturers must provide a PI in all of the products they distribute. When the FDA orders a modification, or the manufacturer has to make a change, CEA Packaging replaces the old PI with updated or corrected PI's. Same holds true for IFU's and DFU's.

- **Capping, Re-capping, Cull and Sort, & Salvage of Tubes/Caps** CEA Packaging hand-caps or re-caps onto full or empty glaminate and plastic tubes for various manufacturers to their torque specifications.

- **Inspection, "repair" & Disposal of Various Products** Sometimes a product does not perform the way a customer intended. CEA Packaging will inspect large lots of product to ensure quality. In some cases we "repair" the defect and return the product. CEA Packaging is committed to the practice of Reduce, Re-Use and Recycle using the highest quality assurance.

- **Kitting for Medical & Pharmaceutical Products** Many products used in the Medical Health Profession have multiple components. These components will be sent to our facility and CEA Packaging assembles a completed package ready for use or sterilization.

- **Kitting for Specialty Products and Retail** Kits include assembly of arts and craft items, point-of-purchase bundles, health and beauty supplies, and many other products.

- **Shrink-wrap** We have multiple lines capable of shrink wrapping a variety of items. A few items we have shrink-wrapped are brochures, lotions, books, coffee, folders, arts and crafts among other products.

- **Bundle Products** Using our Infrared sealer we can add a promotional item to other products. This might include adding a fabric softener to a bottle of detergent or creating "multi - packs" of the same item.

- **Bag Items** We are expert at bagging items. Our semi-automatic bagger and hand sealing baggers allow clients of all functional ability to be involved in bagging. Headers are attached to some of the items making ready for retail.

- **Tray Overwrap** We assemble trays of material, such as food or nutraceutical items, and over wrap the tray with print-registered or clear LDOE film. These trays are then palletized and shipped to retailers such as BJ's or Costco.
